

Project Increment 2

04/03/22

Jodie Serrano

For my project increment or update I did the following. I had text boxes for the menu prices and realized that they were not going to have code so I changed them to labels. In doing so it made the form look better of uncluttered. It was also more efficient as I didn't have a bunch of textboxes. I learned from reading that I can also change the order of the tab so if a customer is tabbing it easily goes from one box to the next. That will be in my next update. I also changed the drop down boxes to checkboxes realizing that usually one person has a menu and will make (usually) one choice for dinner. I also changed on the second form the text boxes names to add the price instead of saying that it was just a choice so when you go to the second page you don't have to guess the price or go back to form 1. When you click on the checkbox you will also get a message. It took me in total about 4 hours to make the changes, watch your video again and add the code. I also did a diagram this time so I would remember the changes I made and notated the code of my changes, that took some time to create. I also had some syntax errors, which I eventually figured out remembering your comment about png and jpg that it must be correct.
